

Amendments to the Specification:

Please amend the specification as follows:

On page 7, please amend paragraph 28 as follows:

[028] A maximum dwell is attained when surface 117 engages surface 119. When such a maximum dwell is attained, surface 117 engages surface 119 to rotatably drive gear 82 about axis 121 in a counterclockwise direction as seen in Fig. 4A. This results in gear 82 rotatably driving gear 110 at a faster rate as compared to gear 104 such that gear 110 is moved along slots 58 and 72 out of engagement with gear 82. Slot 58 permits movement of gear 110 out of engagement with gear 82 to cessate transmission of power to gear 82. Clutch gear 110 remains disengaged from gear 82 until the media sheet becomes disengaged from pre-feed roller 80.
